

Press Release

ROTORCRAFT at EXINTEX in Mexico City

From October 23 to 25, 2008, Rotorcraft attended the EXINTEX International Textile Industry Trade Fair in Mexico City, where the company presented its compact spinning solutions to a very interested audience. In the present, strained international market situation, it is an absolute necessity to reduce costs and keep quality standards high. The visitors' reactions at EXINTEX showed once more that our mechanical/magnetic compact spinning system RoCoS is outranking the pneumatic systems, due to the lower initial investment and lower power consumption and spare parts requirement. With annual power savings compared to pneumatic systems between 6 and 8 Euros per spindle, and in light of a considerably lower capital investment, Rotorcraft asks all ring spinning mills: **CAN YOU AFFORD NOT TO INVEST IN RoCoS?**
